## Description

The Yamaha Concert CSS-1450A 14x5" Steel Snare Drum features a crisp, clear snare drum sound for any performance environment. This drum features a chrome-plated steel shell, three piece tube lugs and Q type snare strainer. Coil snares provide easy playability even for beginners. This basic Yamaha model is ideal for wind ensembles and a wide variety of musical genres.

## **Steel Shells**

Steel shells are used for their sharp attack and clear sound.

## **Coil Snares**

Coil snares that produce a bright sound have been used in the CSS-A Series. Coil snares also sustain longer than straight snares, making it easier to play even-sounding rolls and generally providing easier playability for beginners.

## **Q Type Strainer**

The Q type strainer lets you tighten or release your snares quickly and quietly.

## **Tube Lugs**

The CSS-A Series employs the same tube lugs as the high-end wood shell models. By holding the tension of both the top and bottom heads with unified lugs, an optimal balance of tension between the heads is achieved.

## **Dyna Hoops**

Dyna hoops constructed of 2.3 millimeter thick steel contribute to fast, well-defined attack.

## **Ring Mute**

The supplied ring mute can be used to dampen overtones when a more clearly defined tone is required.
