Description

The Malletech Chamber Series CH18 Medium Hard Marimba Mallets were designed for maximum assertiveness on the instrument. These mallets produces dynamic articulation and projection.

These mallets are perfect for chamber music settings in which the performer sometimes needs to project above the other instruments, and at other times, blend with them. A wide range of tonal colors and articulations can be drawn from the synthetic yarn and winding techniques used to craft these mallets. The balance between head weight and shaft length produces an unusually good feel. The Chamber Series (a.k.a. "Purple Mallet Series") attracts attention for both its looks and sound.

Handles: Birch

Core Type: 1 1/8 in plastic ball Layers: 1-2 layers of latex
