Description

The Tama CSASD Silver Armor snare drum carriers provide the maximum in adjustability, comfort, and durability. All carriers have adjustable height, adjustable shoulder pipes, and adjustable back support. The shoulder and back pads can self-rotate to fit the contour of any size player. Each carrier can be quickly customized for the individual player with a standard tuning key. High quality belly and shoulder pads are easily removed for machine washing. Each carrier is equipped with a dual locking system. Snares, tenors, and bass drums all can be safely locked to the carrier to insure confidence during the most demanding physical motion.

Safety Lock Mount

All Silver Armor Carriers feature a Safety Lock Mounting System which can safely lock any drum in place by activating the black locking tabs. The bass carrier, combined with the Noiseless Carrier Attachment, will eliminate any wobble or rattle. Exclusive to TAMA, this feature allows for complete control of motion and enhanced performance capabilities.

Positioning Bar

By connecting two J-Bars with the Positioning Bar, the distance between both J-Bars will be consistent and allow for easy adjustment of the horizontal and vertical positioning of the drums.

Belly Pad

The detachable belly pad incorporates a wide contact area to disperse the pressure around the belly.

Drum Lift Bumper

The drum lift bumper prevents the drums from being damaged by hitting the carrier when tilting up. No more scratches or chipped hoops.

Sliding Height Adjustment

1

4/10/24

This enables the player to position the drums at the correct height for their body type by adjusting the bolts on the front of the plate with a tuning key.

Movable Pad

The movable pad can rotate around the tube pipe. This enables the pad to fit the player's shoulder type for maximum comfort.

Shoulder Pipe Adjustment

This enables the player to adjust the angle of the shoulder pipe. Gearless adjustment allows the shoulder pads to fit the player's body and diminish the stress around the shoulders.

Backrest Adjustment

The angle of the backrest can be adjusted to disperse the pressure to a wider contact area on the body. The backrest can move in or out to accommodate different size players. The backrest adjustment is completely revolutionary and allows the carrier to mold itself to the player while providing excellent support.
